

CFOC – Mulga Graze investment under Sustainable Ag
Reporting period 3 : July to Dec 2014

ARDGOUR PROJECT

The Boocenbury Swamp Project that Jake and Di Brand are completing is progressing well. They have completed the installation of the alternative water points. This part of the project was completed first to reduce the impact that the feral animals were having on the environment and to allow the domestic stock an alternative water point so that the bore drain could be turned off. This has been completed and they have noticed a significant reduction in the number of feral pigs which they see on the in the region. The property owners also have a feral pig trap installed near the bore drain and in September they trapped 6 in September and 10 in October and since they turned the bore drain off in early November and they have trapped 4 in November and 8 in December.

Photo 2: Stock at New trough

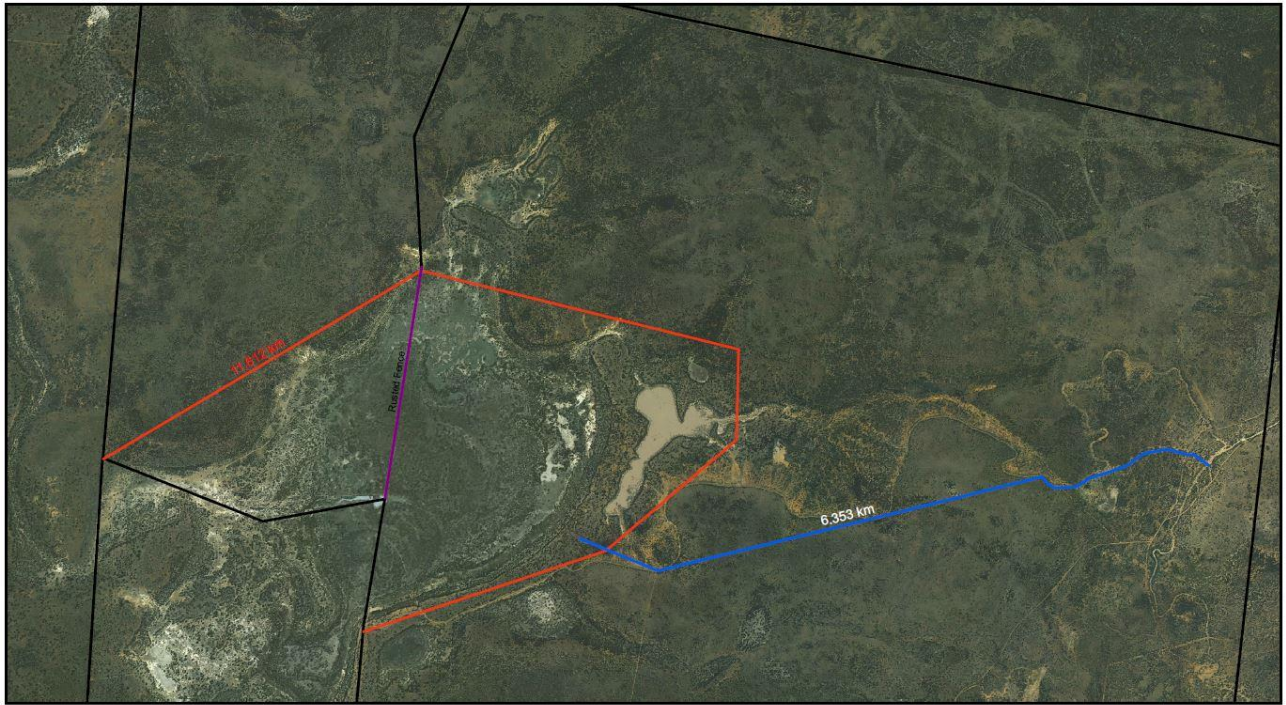

This property hasn't received the rainfall that other regions have and are still feeding their livestock supplement, the machinery needed to clear the fence line is also being used to feed stock and is not available at the moment. They are however planning on moving some cattle so that the machinery is free to clear the fence line and the project is able to continue and be completed on time.
