

CFOC – Protecting Ramsar sites and values under Sustainable Environment
Reporting period 3 : July to Dec 2014
Mooning Project

The Paroo River flows directly from Mooning directly into Currawinya National Park. The Mooning project consists of installing replacement water points as well as the construction of a new fence. Once these new water points are installed they are going to construct a hinge joint fence which will enable them to control the total grazing pressure of both domestic stock and feral animals. The first stage of this project is due to be completed by the 1st of June 2015, which is the installation of the replacement water points.

The water points and the installation of the pipeline is currently underway. The pipeline has been marked out and cleared and all materials are on site and waiting installation.

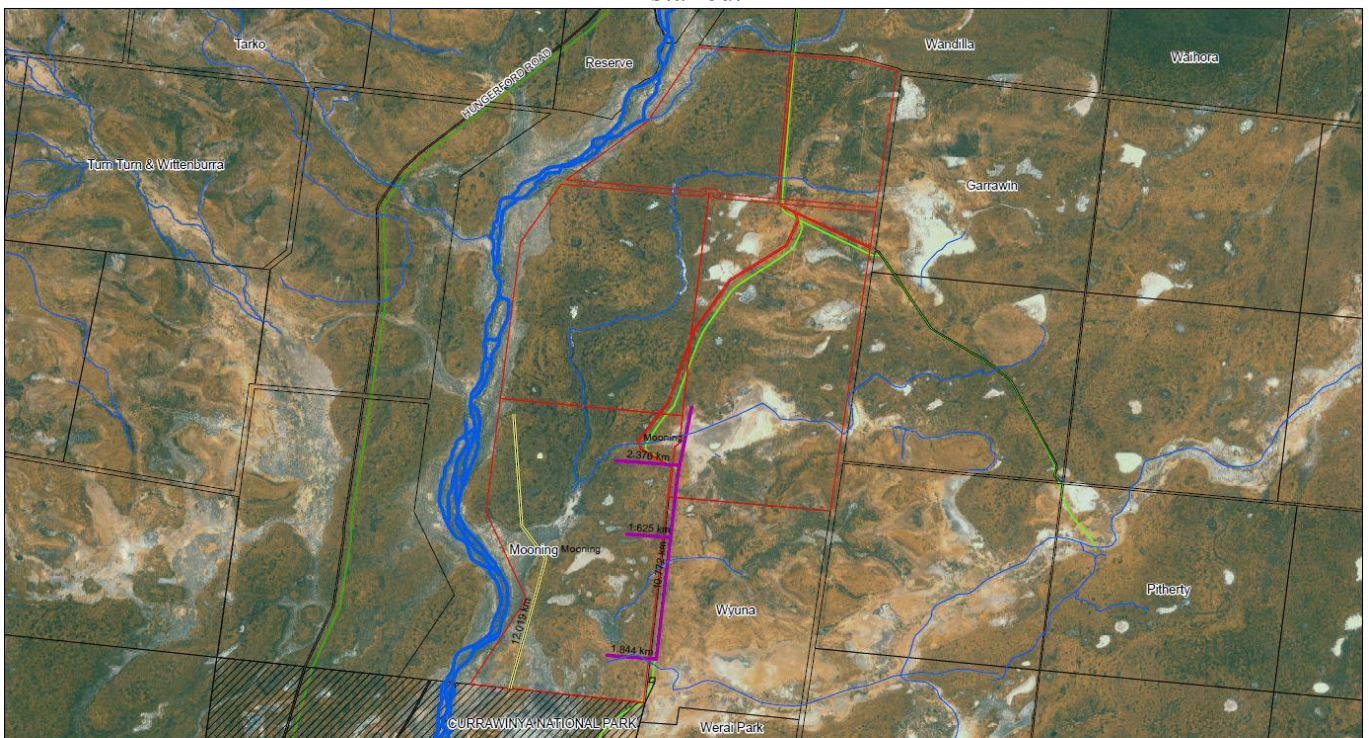

Photo 2 and 3: Materials on site and waiting installation.

The heavy machinery needed to install the polypipe is also on site, however due to the rainfall through December the conditions have been unsuitable. The project is due to be completed by the 1st of June 2015 and the project is on schedule.

Below: A map showing the location of the new fence line and where the new water infrastructure is being installed.
